

GLASS CUT-OUT KIT

DOUBLE CUT-OUT PRO

K4500C-4

Complete kit with line, knife and tools

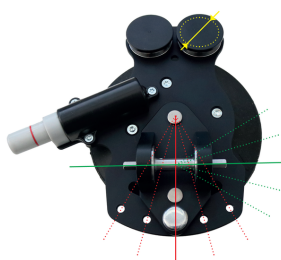

K4500C-5B

Upgrade your single version to double version

Double cut-out pro glass cut-out kit — one-man operation with dual adjustment. The kit has adjustable reels whose angle can be changed, giving a steady pull on the wire. The double suction cups keep the pull steady without the cups shifting.

- 60 % of all glass replacements: the system is mounted in the middle of the glass, then the left and right sides are cut from the 2 reels.
- Counter-hold included: while winding on one reel, the wire is tensioned and released on the other — the wire can be reused many times without breaking.
- Included: 50 m square wire and 100 m fibre line. A cordless drill machine can be used.
- The remaining 40 %: the system is mounted on one side and moved to the opposite side. Trucks may need up to 3 repositionings depending on model.
- Used with fibre line or steel wire. The adjustment ensures the correct wire angle and room for the Cordless-drill machine
- Working time: approx. 10 min. per window.

● Adjustable wheel position relative to the glass corners, so the cutting wire angle is always optimal.

● Adjustment for connecting a cordless drill machine where space is tight.

● Larger wheels — i.e. greater contact surface and less strain on the cutting wire.
